Pouch Laminators

Pouch Laminators are very inexpensive machines that come in a variety of sizes. To make them work the operator inserts the item to be laminated into a laminating pouch of the appropriate size and then feeds it into the pouch laminator, one item at a time. Very slow, but for some applications such as ID cards, it can be a practical solution even though the laminating pouches are much more expensive than film for the roll type machines. The pouch laminator is rapidly being replaced by the new photo ID printers.

Banner Model PL-12A Pouch Laminator

Maximum pouch width 12 inches. Extra width allows for larger documents. [\[Product Details...\]](#)

Banner Model PL-4A Pouch Laminator

Maximum pouch width 3-3/4 inches Great for laminating ID cards and badges, membership cards, and luggage tags. [\[Product Details...\]](#)
