Frank E. Wilber Company

Workhorse 25" Roll Laminator

Accommodates up to 1/2" substrate

Heat controls display both the set temperature and the current temperature

Built in retractable slitters save an enormous amount of cutting time by trimming away side scrap during the laminating process. The two heads can be adjusted for great precision.

Dual tension knobs make it easy to adjust tension as needed to laminate wrinkle free.

Forced air cooling is essential when running thicker films, because the lamination needs to be cooled to get good results.

Both upper and lower rollers are driven.

Can laminate up to 10 mil film.

220 Volt, 20 amps, 3500 watts.

Made in USA
